

HiveIO

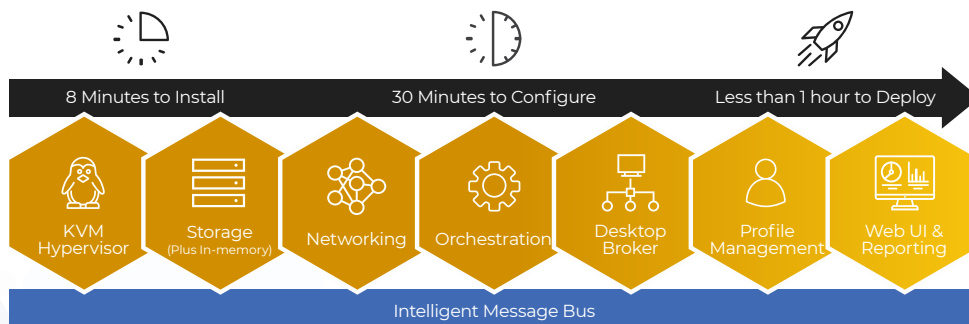

The Ultimate VDI Platform for Higher Education

HiveIO is proud to have 40% of its customer base in the education sector. Hive Fabric, HiveIO's platform for VDI, is the only all-in-one VDI platform and the easiest solution on the market. Powerful performance, able to install on commodity hardware, the software can be fully up and running in less than 1 hour – with no training or certifications required.

Flexibility when and where you need it

We understand IT in an educational setting, since a major segment of our customer base are in higher education. IT organizations within Colleges, Universities, and other educational institutions have unique requirements. Their user base dramatically fluctuates throughout the year, from peaks during class registrations to the lows of summer holidays. The IT team resources, often scarce to begin with, are pulled in many directions during the school year and have small windows of time in the summer months to make changes and bring infrastructure updates and improvements. The technologies education organizations rely on must be nimble, scalable, cost effective, and trustworthy. Simplicity is an added bonus!

Unique functionality

Built on swarm theory, Hive Fabric scales up and down linearly with self-healing capabilities. It leverages a built-in intelligent message bus to orchestrate all activities across the Fabric. The message bus allows you to visualize how your VDI platform is being used, identify what applications are being leveraged and require licensing, detect anomalies and changes in user behavior, and much more. Hive Fabric is also built from the ground up to deliver the best performance. Capitalize on our unique ability – In-memory storage and provide the fastest stateless desktops in the industry. Turning RAM into storage will supercharge your VDI deployment giving end users better than desktop performance.

Benefits

Best performing and most scalable VDI solution

All-in-one solution downloadable as a single ISO file onto a bare metal server without the traditional VDI complexity

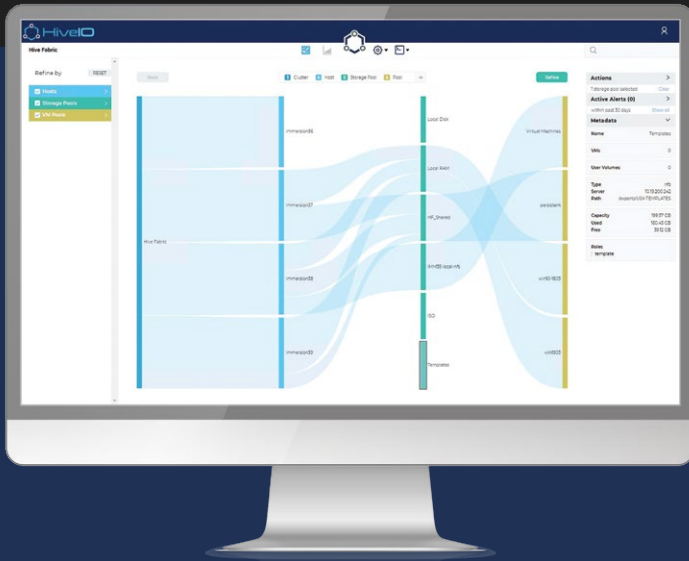

Achieve major savings in CAPEX by running on commodity hardware

Does not require any dedicated management infrastructure

Ability to provide virtual desktops and access to physical machines in the same highly secure fabric

Easily meet internal and external regulatory requirements with full visibility into desktop usage

Industry's lowest cost of ownership

IT Administrators can visualize and manage the entire VDI infrastructure in one view, from the Servers to individual VMs, storage, and end user clients.

A Sample of our Higher Education Customers

The Best VDI for Higher Education

Single Pane Visibility

Able to be managed by a single IT administrator across thousands of virtual desktop users, the administrator is able to view the entire VDI stack in a single pane of glass, showing the impact and dependencies of the virtual machines, storage and clients, in a single view.

Special Flexible Educational Pricing

Your success is our success. We understand the licensing needs of colleges and universities differ from enterprise accounts, based on the fluctuation of demand on IT. Our customers are able to take advantage of the following pricing structure & benefits:

	Months	Max VM Count	Total VM
Peak Period	10 mo	x	10x
Quit Period	2 mo	y	2y
Total VM Licenses*			10x + 2y

*Total VM licenses are reconciled at the end of the prepaid term. Any overages are charged at the per VM price at the end of the contract period. Monthly reporting allows you to stay in control of your usage.
